## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Messinger (3,208,234).

Messinger shows an air conditioning system for an airplane that compresses air (line 24), cools the compressed air (in heat exchanger 26, among other places), and supplies the cooled air to a cabin for ventilation (through line 80). The system also comprises a liquid coolant (glycol and water) which is used to cool avionics (102 and 106). Turbine 12 serves to expand the compressed air to provide cooling. The entire cabin of the airplane is seen as the pressurized volume. In regard to saving energy by allowing a quantity of outside air to remain outside air, it is noted that the ram air 28 stays outside air and is not passed to the interior of the cabin.

Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Zywiak (6,615,606).

Art Unit: 3744

Zywiak shows a cooling system for an airplane which pressurizes an air stream (20), cools the air stream(30) and supplies the stream to a passenger compartment (66). It is noted that bleed air was once outside air that has been pressurized. Supplemental liquid cooling systems 70 and 90 are used to cool avionics and use polyalphaolefin as the heat transfer fluid. Turbines 22 and 24 cool the compressed air. The ram air used in heat exchangers 16 and 30 remains outside air throughout the heat transferring process.

Claims 1-4,6-10,12-16 and 18-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Cowell et al (4,966,005).

Cowell et al show a cooling system for an airplane which pressurizes an air stream (24), cools the air stream(44) and supplies the stream to a passenger compartment (16). It is noted that bleed air was once outside air that has been pressurized. Supplemental liquid cooling system 14 is used to cool avionics or provide supplemental cooling to the air entering the cabin. Turbine 52 cools the compressed air. The ram air used in heat exchanger 22 remains outside air throughout the heat transferring process.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Doerrler whose telephone number is (571) 272-4807. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
